

REDD Engineering & Construction, Inc.

ENGINEERING SERVICES

REDD Engineering is a full-service, multi-disciplined engineering firm primarily serving industrial clients and facilities. Our core strength is in chemical and mechanical processes and systems with oversight/QA and coordination of all disciplines over all phases of a project.

Our engineers are very experienced in hydrocarbon processing, mining, energy, biofuels, petrochemicals, and other technology-based processes. We are highly capable with respect to process optimization, debottlenecking, and new process implementation. This includes equipment selection and specification, piping, pumping and storage system design, and implementation with appropriate controls/automation.

For Engineer-Procure-Construct (EPC) and Turnkey projects, we work with a commitment to helping our clients understand their needs and how they can meet those needs at lowest life cycle cost.

SERVICES PROVIDED

CHEMICAL / PROCESS
MATERIAL HANDLING
CIVIL / STRUCTURAL
MECHANICAL
CONTROLS / INSTRUMENTATION /
AUTOMATION
OPERATIONS SUPPORT
COST / VALUE
PIPING
ELECTRICAL
PREVENTATIVE MAINTENANCE
ENVIRONMENTAL
PROCESS OPTIMIZATION
FACILITIES MODERNIZATION
HVAC / INDUSTRIAL VENTILATION

- Engineering and Management Consulting
- Planning, Design and Management Services
- Engineering, Procurement and Construction (EPC) Services
- Maintenance Contracting
- Process and Operations Modernization and Optimization
- Appraisals, Audits and Investigations
- Technical and Economic Feasibility Studies
- Process Safety Management Consulting
